Our team was founded in 2014 and started working professionally based on the 30-year experience of its managers and employees

Designing and producing conference chairs requires knowledge, experience and an experienced work team

We are an experienced and fresh team, and we believe that the future can be changed unlike the past, and the best way to predict the future is to make it

The effort of our team is honesty in speech, behavior and actions and we work hard to realize this goal every day

Our task is to control and monitor the continuous quality of raw materials and final products, and quality improvement is the constant responsibility of our team

The competitive advantage of our team is the custom design and production of the product based on the mental idea of the customers .and turning the idea into a product is the result of our knowledge

A dynamic product is not empty of the past and without regard to the future, the goal of our team is to provide a creative and distinctive product, and we believe that creativity never ends

This is what we specialize in best. See what we believe and trust our experience. We hope to be worthy of your trust

Wood Color Quality

Wooden Acoustic Panel

Colors

The boards have a natural color (NATURE) that may present uneven nuances due to the natural raw materials, wood and cement, or they can be painted to ensure uniform color, without altering the acoustic performance.

NATURE

مشخصات: آکوستیک ، آنتی باکتریال ، نسوز ، ضد آب و انجماد ، سازگار با محیط زیست ، تضمین عمر بالای ۷۰ سال

Mineralised fir wood wool, bound with Portland cement. CELENIT boards are made of **wood wool** and mineral binders, mainly **Portland cement** and **marble dust**.

The characteristics of CELENIT panels, such as mass, porous structure, low elastic modulus and internal absorption effect, make them very suitable to reduce background noise (**sound absorption**) and to shield sound transmissions (**sound insulation**).

Fibres are mineralised: the process stops the biological deterioration, making the fibres totally inert. In addition to retaining wood's mechanical properties, it increases the level of resistance. Fibres are coated with Portland cement and bound together under pressure to form a **steady, resistant, compact and durable structure**.

CELENIT ACOUSTIC | DESIGN provides a range of advanced solutions that combine high **sound absorption** performance with the **sustainability** and eco-compatibility of a natural product, which is both aesthetically attractive and mechanically **resistant**.
